Tanglewood 2020 Online Festival

How to watch....

Stream to any internet browser on your desktop, tablet, iPad, iPhone, or android phone!

The Tanglewood 2020 Online Festival allows users to watch and listen to more than 70 Tanglewood, Tanglewood Learning Institute, and Tanglewood Music Center events over the internet. Donors of $100 or more enjoy unlimited access to all streaming events. Single event passes ranging from $5 to $12 are also available. Free content for logged in users is available from July 5 through August 23.

1. The Festival is accessible through any internet browser on computers, tablets, and on smartphones at www.Tanglewood.org.
2. Log in to the Festival Streaming Portal using your Tanglewood.org or BSO.org email address and password. Your events will be viewable on your My Videos page. New events may be purchased through the last day of streaming for that event and may be streamed as many times as you’d like during the streaming window.
3. Most events will be available for 7 days after the streaming start date. Many will remain available throughout the summer.

A calendar of all the Tanglewood 2020 Online Festival events and streaming dates may be found HERE, with special notes about live broadcasts.

I’d like to watch on my TV....

The Tanglewood 2020 Online Festival playback is currently supported only on internet browsers. We have included some additional hints below in the event you have a SmartTV or are already equipped with mirror or casting devices to send content from your computer, tablet, or smartphone to your TV.

We are sorry that we cannot provide customer service or technical support for TV streaming at this time.

- Apple devices / AppleTV
  - To mirror your iPhone or other iOS device to a TV or projector screen that is attached to an Apple TV device:
    - Open the Control Center: pull down from the top right corner of the iPhone screen (in iOS 12) or up from the bottom of the screen (in iOS 11 and earlier)
    - Tap Screen Mirroring
- Tap **Apple TV** in the list of available devices. A checkmark appears next to **Apple TV** when the connection is made, and the Control Center image appears on the TV or projector.
- Tap the screen on your iPhone to close Control Center and display your content.
- When you are ready to stop mirroring from your iPhone, pull down from the top of the screen to reopen Control Center, click **AirPlay**, and select **Stop Mirroring**.
  - Details on Airplay Mirroring can be found here: [https://support.apple.com/en-us/HT204289](https://support.apple.com/en-us/HT204289)
- **Android Devices**
  - To mirror on an Android device, go to **Settings**, click **Display**, followed by **Cast Screen**. Then tap the **Menu** button in the top right corner of the screen and check the **Enable Wireless Display** box. Your TV streaming device should now appear in the Cast Screen section.
  - If your streaming device doesn't appear, back out to the **Settings** screen and reopen Cast Screen.
  - Once you see your Roku box or stick appear on the screen, simply tap on it to connect. Now whatever you see on your mobile device is exactly what will be displayed on your TV.
- **Chromecast**
  - Stream to Chromecast from Desktop or Laptop
    - Log into the Festival Streaming Portal in the Chrome Browser and select your event for streaming
    - Open the Chrome menu in the top right corner (three dots)
    - Choose the **Cast** option
    - Select your casting source to connect your computer and TV for playback
    - If you have issues with a Chromecast stream, try setting the video to a lower quality
    - To disconnect from Chromecast, click the blue **Stop** icon next to your casting source.
  - Stream to Chromecast from tablet or smartphone
- **SmartTV**, for example SamsungTV
  - Use your smart TV’s internet browser to load the Tanglewood Streaming Portal
  - Enter your email and password
  - Stream directly to your TV
- **Roku Mirroring**
  - You must first enable screen mirroring on your Roku device. This can be done by clicking on **Settings** in the left navigation bar, followed by **Screen Mirroring**.
  - Roku can mirror from newer android and windows devices.
  - Note: there is no internet browser option provided with native the Roku apps.
- **Firestick Mirroring (Windows)**
  - Before getting started, make sure that the Firestick is set up properly and that your PC and Firestick are on the same Wi-Fi network.
  - Press and hold the home button until a menu pops up on the screen.
  - Select Mirroring. You will now see a message that says, “While this screen is open, guest devices can wireless mirror their display to: (name)’s Fire Stick.”
On your Windows 10 PC, open the Notifications section by clicking on the text message icon at the bottom right of the screen (it could also be empty if you have no notifications).

Click on Connect. You should see your Firestick listed if both devices are on the same Wi-Fi network.

Click on the Firestick listed to connect. You should now see your PC screen mirrored on the TV.

Projection Modes:
- **Duplicate** — mirrors everything on your PC
- **Extended** — Uses your TV as a second screen
- **Second screen only** — Uses your TV as the primary display

**Stream to your TV with Cables/Adapters**
- Many TVs and laptop/desktop computers come equipped with an HDMI port
- If your TV has an HDMI Port:
  - Try connecting your apple device using a lightning-to-HDMI cable
  - Try connecting your android device using a micro-USB or USB-C to HDMI cable
  - Try connecting your laptop or desktop using an HDMI-to-HDMI cable
- Once connected via cable, select the appropriate source location on your TV
- You should now be able to deliver your computer video and sound through your home entertainment system.
